PROFESSIONAL SUMMARY

GenAI Full Stack Engineer building AI-integrated web applications end to end – from real-time AI chat experiences to tools that turn a single prompt into a working product, using **Next.js, React, TypeScript, and Node.js**, backed by a strong foundation in Object-Oriented Programming (OOPs), DBMS, Operating Systems, and Computer Networks. Actively looking for full-stack / GenAI engineering opportunities to build products that solve real problems.

EDUCATION

Dr. Akhilesh Das Gupta Institute of Professional Studies <i>Bachelor of Technology (B.Tech), Information Technology – Score: 76.60%</i>	New Delhi, India 2023 – 2027 (Expected)
---	--

TECHNICAL SKILLS

Languages	: JavaScript, TypeScript, SQL
Frameworks	: Node.js, React.js, Next.js, Express.js
Libraries	: tRPC
Databases	: PostgreSQL, MongoDB, Pinecone (Vector DB)
AI / GenAI	: RAG, Embeddings, LLM Integration
Tools	: Git

PROJECTS

FillTheForm (Building) – Form Builder	<i>Next.js, TypeScript, tRPC, PostgreSQL, Drizzle ORM</i>	2026
- Solving the friction of clunky, rigid form builders by designing an interactive UI with easy drag-and-reorder navigation, so users can build a fully functional form with zero technical setup - Added AI-assisted form generation that turns a single natural-language prompt into a complete, structured form spanning 5+ field-type categories (input, choice, date/time, media, advanced) – no manual field configuration needed - Migrated the entire frontend from a React/TanStack Router SPA to Next.js App Router, converting routing, hooks, and layout components while strictly preserving all existing Tailwind styles - Designed a versioned PostgreSQL schema (via Drizzle ORM) with form snapshotting, so historical submissions remain valid and queryable even after form fields are edited post-launch - Implemented public share links, live view/submission counts, polling support, and an AI form generation flow that converts natural-language prompts into structured forms using a validated field-type registry - Built the API layer with tRPC for end-to-end type safety between frontend and backend		
Nexus AI – ChatGPT Clone (AI Chat Application)	<i>Next.js, TypeScript, Prisma, Clerk, Vercel AI SDK</i>	2026
- Building a full-stack AI chat application using Next.js 16, React 19, TypeScript, Prisma, and PostgreSQL (Neon), with Clerk authentication and real-time streaming responses via the Vercel AI SDK - Integrated OpenAI models for conversational responses, with conversation creation and routing handled through Next.js App Router - Built the frontend with TanStack Query for data fetching/caching and shadcn/ui components styled with TailwindCSS v4		

CERTIFICATIONS & COMMUNITY

- Certification:** Full Stack Web Development – Chai Code
- Authored **40+ technical blogs** on web development and AI, available at kunalmadoliya.me
